MEMORANDUM

DATE: January 24, 2006

TO: Joanne LaBaw, Task Monitor, EPA, Seattle, Washington, Mail Stop ECL-115

FROM: Linda Costello, START-3 Project Leader, E & E, Seattle, Washington

SUBJECT: Hazard Ranking System Score
Larson AFB Titan Missile Facility S-2
Warden, Washington

REF: Contract Number EP-S7-06-02
Technical Direction Document Number 06-01-0023

cc: Renee Nordeen, START-3 Project Manager, E & E, Seattle, Washington

A Hazard Ranking System (HRS) score of 1.50 was derived for the Larson AFB Titan Missile Facility S-2 site, which is located near Warden, Washington. A preliminary assessment (PA) was for the site was conducted by the Washington Department of Ecology (Ecology). The information from this PA was used to develop this HRS score. Additionally, new reference material is supplied at the end of this memorandum to supplement missing information in the PA.

The site is a former Titan I intercontinental ballistic missile facility that was operated by the United States Air Force from 1962 to 1966. Hazardous substances used, stored, or disposed at the site during the period of military operation include diesel oil, RP-1 fuel (kerosene), lubrication oil, hydraulic fluid, solvents, de-greasers, transformer fluids containing polychlorinated biphenyls, nickel-cadmium batteries, sulfuric acid, liquid oxygen, nitrogen, and helium. Also, lead-based paint and waste oils may have been used or disposed at the site.

In the 1970s, the site was used by a subsequent land owner for liquid manure and chemical fertilizer storage. Further, a methanol plant was constructed at the site and used for a short period of time.

The PA work included limited sampling and analyses at potential sources. Analytical results from this sampling effort, the PA report, supplemental information compiled by the START-3, and when necessary professional assumptions were used in preparing this HRS score.

The HRS scoresheets, which were generated using Quickscore version 2.2 software, are attached. The following information and assumptions were used to derive the score.

Sources:

- **Septic System (contaminated soil).** A soil sample was collected near the septic system, in what appears from the sample location map provided in the PA to be a drainage area associated with the septic systems primary sewage vault. This sample contained

methylen chloride at 22 micrograms per kilogram. The dimensions of the drainage area are not provided in the PA report. For scoring purposes, it is estimated that this area is 100 feet by 50 feet. The hazardous waste quantity value for this source is 0.15 (i.e., [100 feet x 50 feet]/34,000 for Tier D). The containment factor value for this source for all pathways is 10.

- **West Ditch (contaminated soil).** A soil sample was collected from an area labeled the "West Ditch". This ditch is near one of the launchers and may have received wastes associated with activities at the launcher. The soil sample contained chromium (110 milligrams per kilogram [mg/kg]) and copper (39.3 mg/kg) at concentrations that appear to be elevated (no background sample was collected). The dimensions of the west ditch are not provided in the PA report. For scoring purposes, it is estimated that this area is 75 feet by 25 feet. The hazardous waste quantity value for this source is 0.06 (i.e., [75 feet x 25 feet]/34,000 for Tier D). The containment factor value for this source for all pathways is 10.

Groundwater Migration Pathway:

- Two groundwater wells exist at the site, however, groundwater has not been sampled. For scoring purposes, it is assumed that an observed release to groundwater exists. The nearest drinking water wells are three municipal wells located between 0.5 and 1 mile of the site. Contamination associated with the site has not been detected in these wells. For this reason, all wells are considered to be subject to potential contamination, rather than actual contamination.
- Three aquifers exist in the area of the site: the shallow unconfined aquifer to approximately 75 feet below ground surface (bgs), the Wanapum aquifer to approximately 625 feet bgs, and the Grande Ronde aquifer which underlies the Wanapum aquifer. The PA does not state whether these aquifers are interconnected. For scoring purposes, the aquifers will be considered to be interconnected.
- The net precipitation factor value is 1.
- The depth to the aquifer is between 25 feet and 250 feet which derives a depth to aquifer factor value of 3.
- The PA report indicates geology underlying the site includes clay. The thickness of the clay layer is not provided. A thickness between 5 and 100 feet is assumed. The hydraulic conductivity of clay is 10^{-8} . A travel time factor value of 5 is assigned.
- The highest toxicity/mobility factor value that can be assigned is 100 based on chromium as the contaminant of concern.
- The nearest well is located between 0.5 and 1 mile of the site (see Attachment A). The nearest well factor value is 9.
- Approximately 2,660 people use groundwater for drinking water within the 4-mile target distance limit (TDL; Figure 1; see Attachment A). The populations using groundwater for drinking water by distance ring are as follows:

Distance Ring	Population	Distance Weighted Population Value
0 to 0.25 mile	0	0
0.25 to 0.5 mile	0	0
0.5 to 1 mile	2,565	523
1 to 2 miles	23.36	3
2 to 3 miles	7.08	0.5
3 to 4 miles	64.24	4
Total distance weighted population value		$530.5/10 = 53.05 \Rightarrow 53$

- Groundwater is used in commercial food preparation (see Attachment A). A resource factor value of 5 is assigned.
- The site is in a wellhead protection area (see Attachment A). A wellhead protection area factor value of 20 is assigned.

Surface Water Migration Pathway:

- An observed release to surface water is not assumed. All targets are assumed to be subject to potential contamination.
- One probable point of entry (PPE) for the surface water migration pathway exists for the site at the location where surface runoff enters an unnamed creek located approximately 2,000 feet south of the site. This creek flows east meeting an unnamed ditch or canal approximately 0.7 mile downstream. The ditch flows north, merging with the East Low Canal approximately 0.7 mile downstream. The 15-mile TDL concludes 13.6 miles downstream in this canal (Figure 2).
- The flow rates of the streams within the 15-mile TDL are not provided in the PA report. For scoring purposes, it is estimated that the unnamed creek and unnamed ditch each have flow rates between 1 and 10 cubic feet per second (cfs). The East Low Canal is estimated to have a flow rate of 10 to 100 cfs.
- The site's drainage area is not provided in the PA report. Based on the size of the site and surrounding topography, it is estimated that the drainage area is 200 acres. A drainage area value of 2 is assigned.
- Soils at the site consist primarily of Malaga Sandy loam which has moderately rapid to very rapid permeability. Runoff is generally slow. A soil group designation of A is assigned for the site.
- The 2-year, 24-hour rainfall event is 0.8 inches. A rainfall/runoff value of 0 is assigned.
- The runoff factor value for the site is 0.
- The distance from the sources at the site to surface water is approximately 2,000 feet. A distance to surface water factor value of 9 is assigned.

- The site is not located in a floodplain. A floodplain factor value of 0 is assigned.

- Drinking Water Threat

- The highest toxicity/persistence factor value that can be assigned is 10,000 based on chromium as the contaminant of concern.
- The PA report does not discuss whether drinking water intakes exist within the 15-mile TDL. Since the surface water bodies within the 15-mile TDL are either very small (i.e., either a small creek or a ditch) or are canals, it is assumed that no drinking water intakes exist. A nearest intake value of 0 is assigned.
- The PA report does not discuss surface water resource use, however, due to the agricultural setting of the site and the presence of a canal, it is assumed that surface water is used for the irrigation of 5 acres or more of commercial food crops. A resource factor value of 5 is assigned.

- Human Food Chain Threat

- The highest toxicity/persistence/bioaccumulation factor value that can be assigned is 5×10^6 based on chromium as the contaminant of concern.
- Fishing is not discussed in the PA report. The unnamed creek to the south of the site is not expected to be used as a fishery due to its small size. Likewise, the unnamed ditch and the canal are not expected to be used as fisheries. Since no fisheries exist within the 15-mile, the Human Food Chain Threat receives a score of 0.

- Environmental Threat

- The highest ecotoxicity/persistence/environmental bioaccumulation factor value that can be assigned is 5×10^6 based on chromium or copper as the contaminant of concern.
- Federal- and State-listed species that may be present along the 15-mile TDL are not discussed in the PA report. Wetlands do not exist along the surface water migration pathway (see Attachment B).

Soil Exposure Pathway:

- Exposed contaminated soil exists at the site. Contaminants present include chromium, copper, and methylene chloride.
- The highest toxicity factor value that can be assigned is 10,000 based on chromium as the contaminant of concern.

- Resident Population Threat

- No residences, schools, or daycare facilities occur on the area of observed contamination. The resident individual factor value is 0.
- No workers are present at the site. A workers factor value of 0 is assigned.
- No resources such as commercial agriculture, silviculture, or livestock production occur on an area of contamination.
- No terrestrial sensitive environments are documented to occur on an area of

contamination.

- Nearby Population Threat

- The site is fenced, yet accessible to the public. For scoring purposes, the site is considered to be accessible with no public recreation use. The area of exposed contaminated soil is estimated to be 6,875 square feet. Based on this information, a nearby population likelihood of exposure factor value of 5 is assigned.
- The nearest individual is between 0 and 0.25 mile of the site. A nearby individual factor value of 1 is assigned (see Attachment B).
- Approximately 2,538 people reside within a 1 mile travel distance of the site as follows (see Attachment B):

Distance Ring	Population	Distance Weighted Population Value
0 to 0.25 mile	557	13
0.25 to 0.5 mile	1,392	20
0.5 to 1 mile	589	3
Total distance weighted population value		$36/10 = 3.6 \Rightarrow 4$

Air Migration Pathway:

- An observed release to the air migration pathway is not assumed. Targets are subject to potential contamination.
- The highest gas containment factor value assigned to a source at the site is 10, the highest gas source type factor value is 19 (i.e., for contaminated soil), and the highest gas migration potential factor value is 17 (i.e., for methylene chloride). Combining these values generates a gas potential to release value of 360 (i.e., $10 \times [19 + 17]$).
- The highest particulate containment factor value assigned to a source at the site is 10; the highest particulate source type factor value is 22 (i.e., for contaminated soil), and the highest particulate migration potential factor value is 17 (i.e., for eastern Washington). The particulate potential to release value is 390 (i.e., $10 \times [22 + 17]$).
- The highest toxicity/mobility factor value that can be assigned is 10,000 based on chromium as the contaminant of concern.
- The nearest resident is located between 0 and 0.25 mile of the site. The nearest individual factor value is 7 (see Attachment B).
- Approximately 3,104 people reside within 4 miles of the site as follows (see Attachment B):

Distance Ring	Population	Distance Weighted Population Value
0 to 0.25 mile	557	131
0.25 to 0.5 mile	1,392	88
0.5 to 1 mile	589	8
1 to 2 miles	116	0.8
2 to 3 miles	195	0.4
3 to 4 miles	255	0.2
Total distance weighted population value		$228.4/10 = 22.84 \Rightarrow 23$

- No Federal- and State-listed endangered or threatened species are known to occur within the 4-mile TDL. Wetlands within the 4-mile TDL are present as follows (see Attachment B):

Distance Ring	Wetland (Acres)	Assigned Value	Distance Weight	Distance Weighted Target Value
0 to 0.25 mile	0	0	0.25	0
0.25 to 0.5 mile	0	0	0.054	0
0.5 to 1 mile	0.8	0	0.016	0
1 to 2 miles	148.4	125	0.0051	0.6375
2 to 3 miles	200.7	250	0.0023	0.575
3 to 4 miles	242.8	250	0.0014	0.35
Total TDL distance weighted target value		$1.5625/10 = 0.15625$

**LARSON AFB TITAN MISSILE FACILITY S-2
GROUNDWATER WELL SUMMARY**

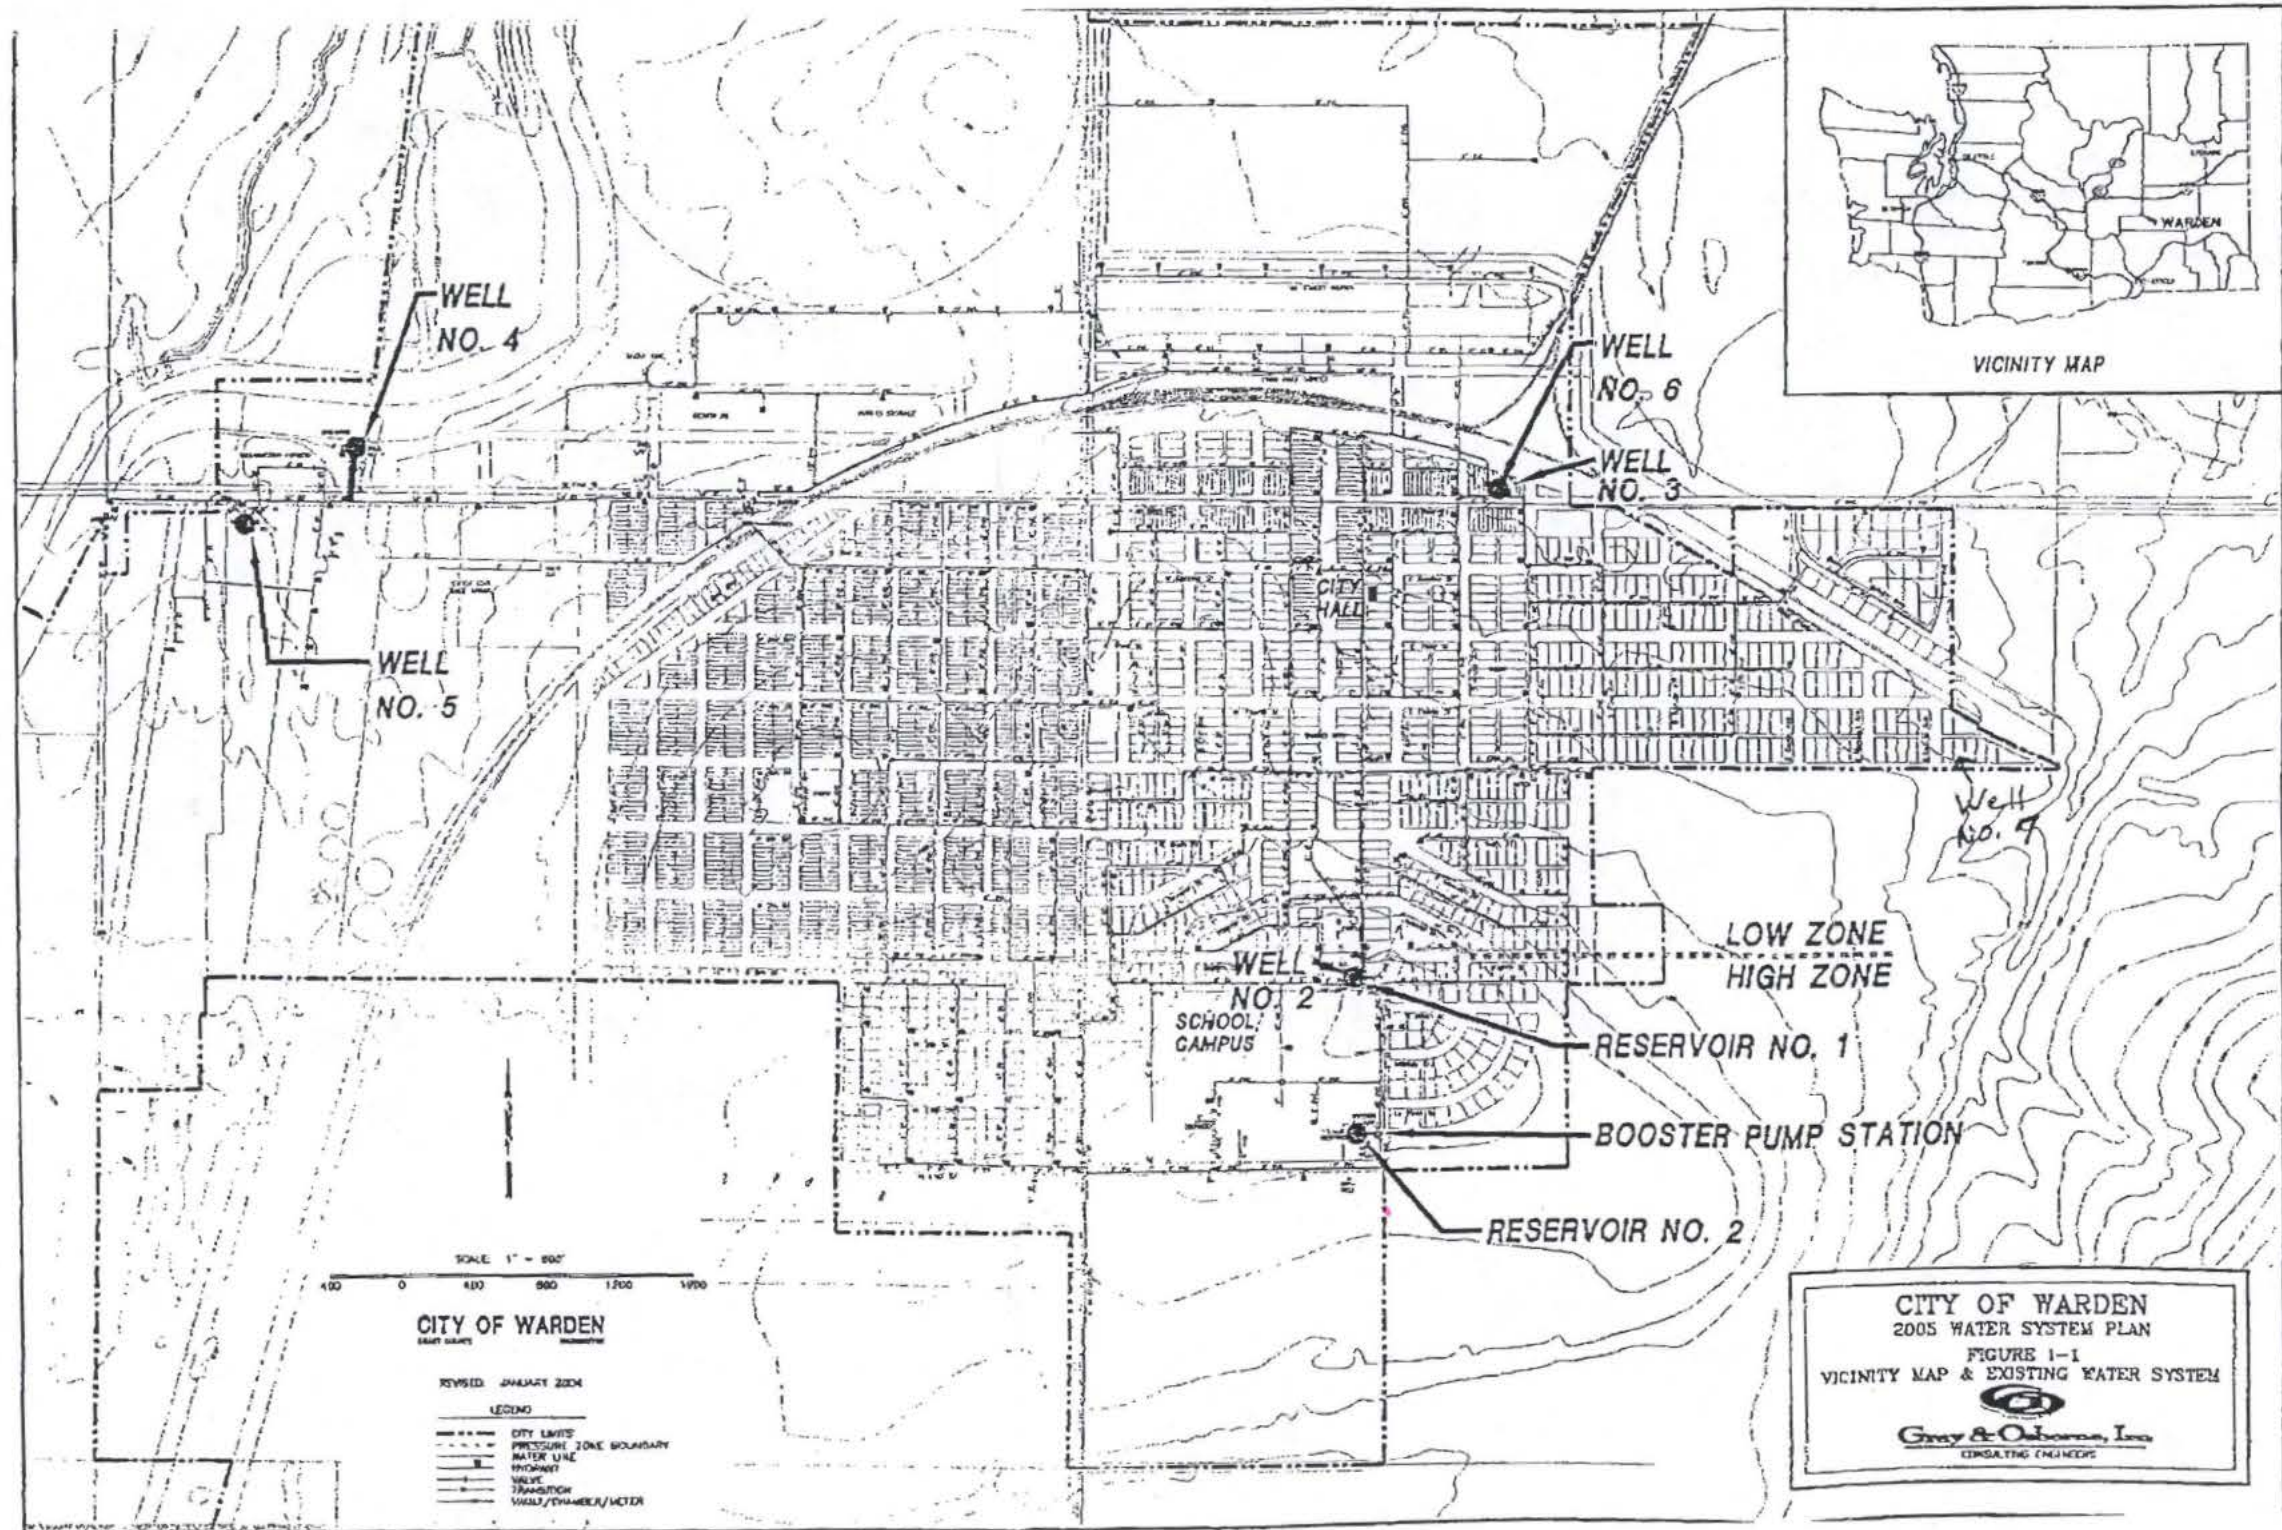

Distance Ring	Number of Wells (a)
0 - ¼ mile	0
¼ - ½ mile	0
½ - 1 mile	3 municipal wells (2,565 people total)
1 - 2 miles	8 (23.36 people)
2 - 3 miles	24 (70.08 people)
3 - 4 miles	22 (64.24 people)

^a - Domestic well populations are based on the average number of person per household for Grant County of 2.92 people.

HRS MUNICIPAL WELL CONTACT REPORT

pg 1 of 1

Person contacted				Title				Phone number			
Mike Thompson				City Administrator				509-349-2033			
Agency/affiliation: City of Warden						Department:					
Contacted by: Renee Nordeen											
Date: January 3, 2006						Time: 0930					
Site name: Larson Air Force Base Titan Missile Facility S-2											
TDD/PAN:											
How many wells are in the system? 4											
SO1	SO2	SO3	SO4								
Pumping capacity of each well? Pumping capacity is in gallons per minute											
1200	1500	1200	backup								
Are they blended, or do they serve separate communities? The wells are blended.											
How many people does each system serve? 2,565 people											
Can you provide a map depicting well locations? Map attached											
Are the wells currently sampled? Yes						How often?					
Is the data available? Data has not been published yet.											
Are there any stand-by wells? Yes											
Are stand-by wells used for drinking water at least once a year? Yes											
Are stand-by wells maintained on a regular basis so that water can be withdrawn ? Yes											
Are you unable to use any of the wells? Two of the wells are currently being decommissioned due to EDB contamination.											
Are they unusable because of contamination? Yes (1 because of contamination and 1 too small)											
What contaminants? EDB											
What aquifer is each well drawing from? Wells SO1 and SO2 from Wanapum and SO3 from both Wanapum and Grande Ronde											
Are any of the wells located in a well head protection area? Yes						Which ones? All of the wells.					
<p>Well No. 2 is a monitoring well. Well No. 3 is being decommissioned because it is too small. Well No. 4 (SO1) is being decommissioned because of EDB contamination. Well No. 5 (SO2) is contaminated with EDB, City is attempting to save the well. Well No. 6 (SO3) shows no signs of contamination. Well No.7 & has recently been drilled and it not on-line with the city at this time.</p> <p>Two potato processing plants in the city use between 1.2 and 1.5 million gallons of water per day from the wells.</p> <p>Wells SO1 and SO2 are drawn from the Wanapum aquifer and well SO3 is drawn from a combination of the Wanapum and Grande Ronde aquifers.</p>

SUBJECT: National Wetlands Inventory

REF: Contract Number EP-S7-06-02
Technical Direction Document 06-01-0023

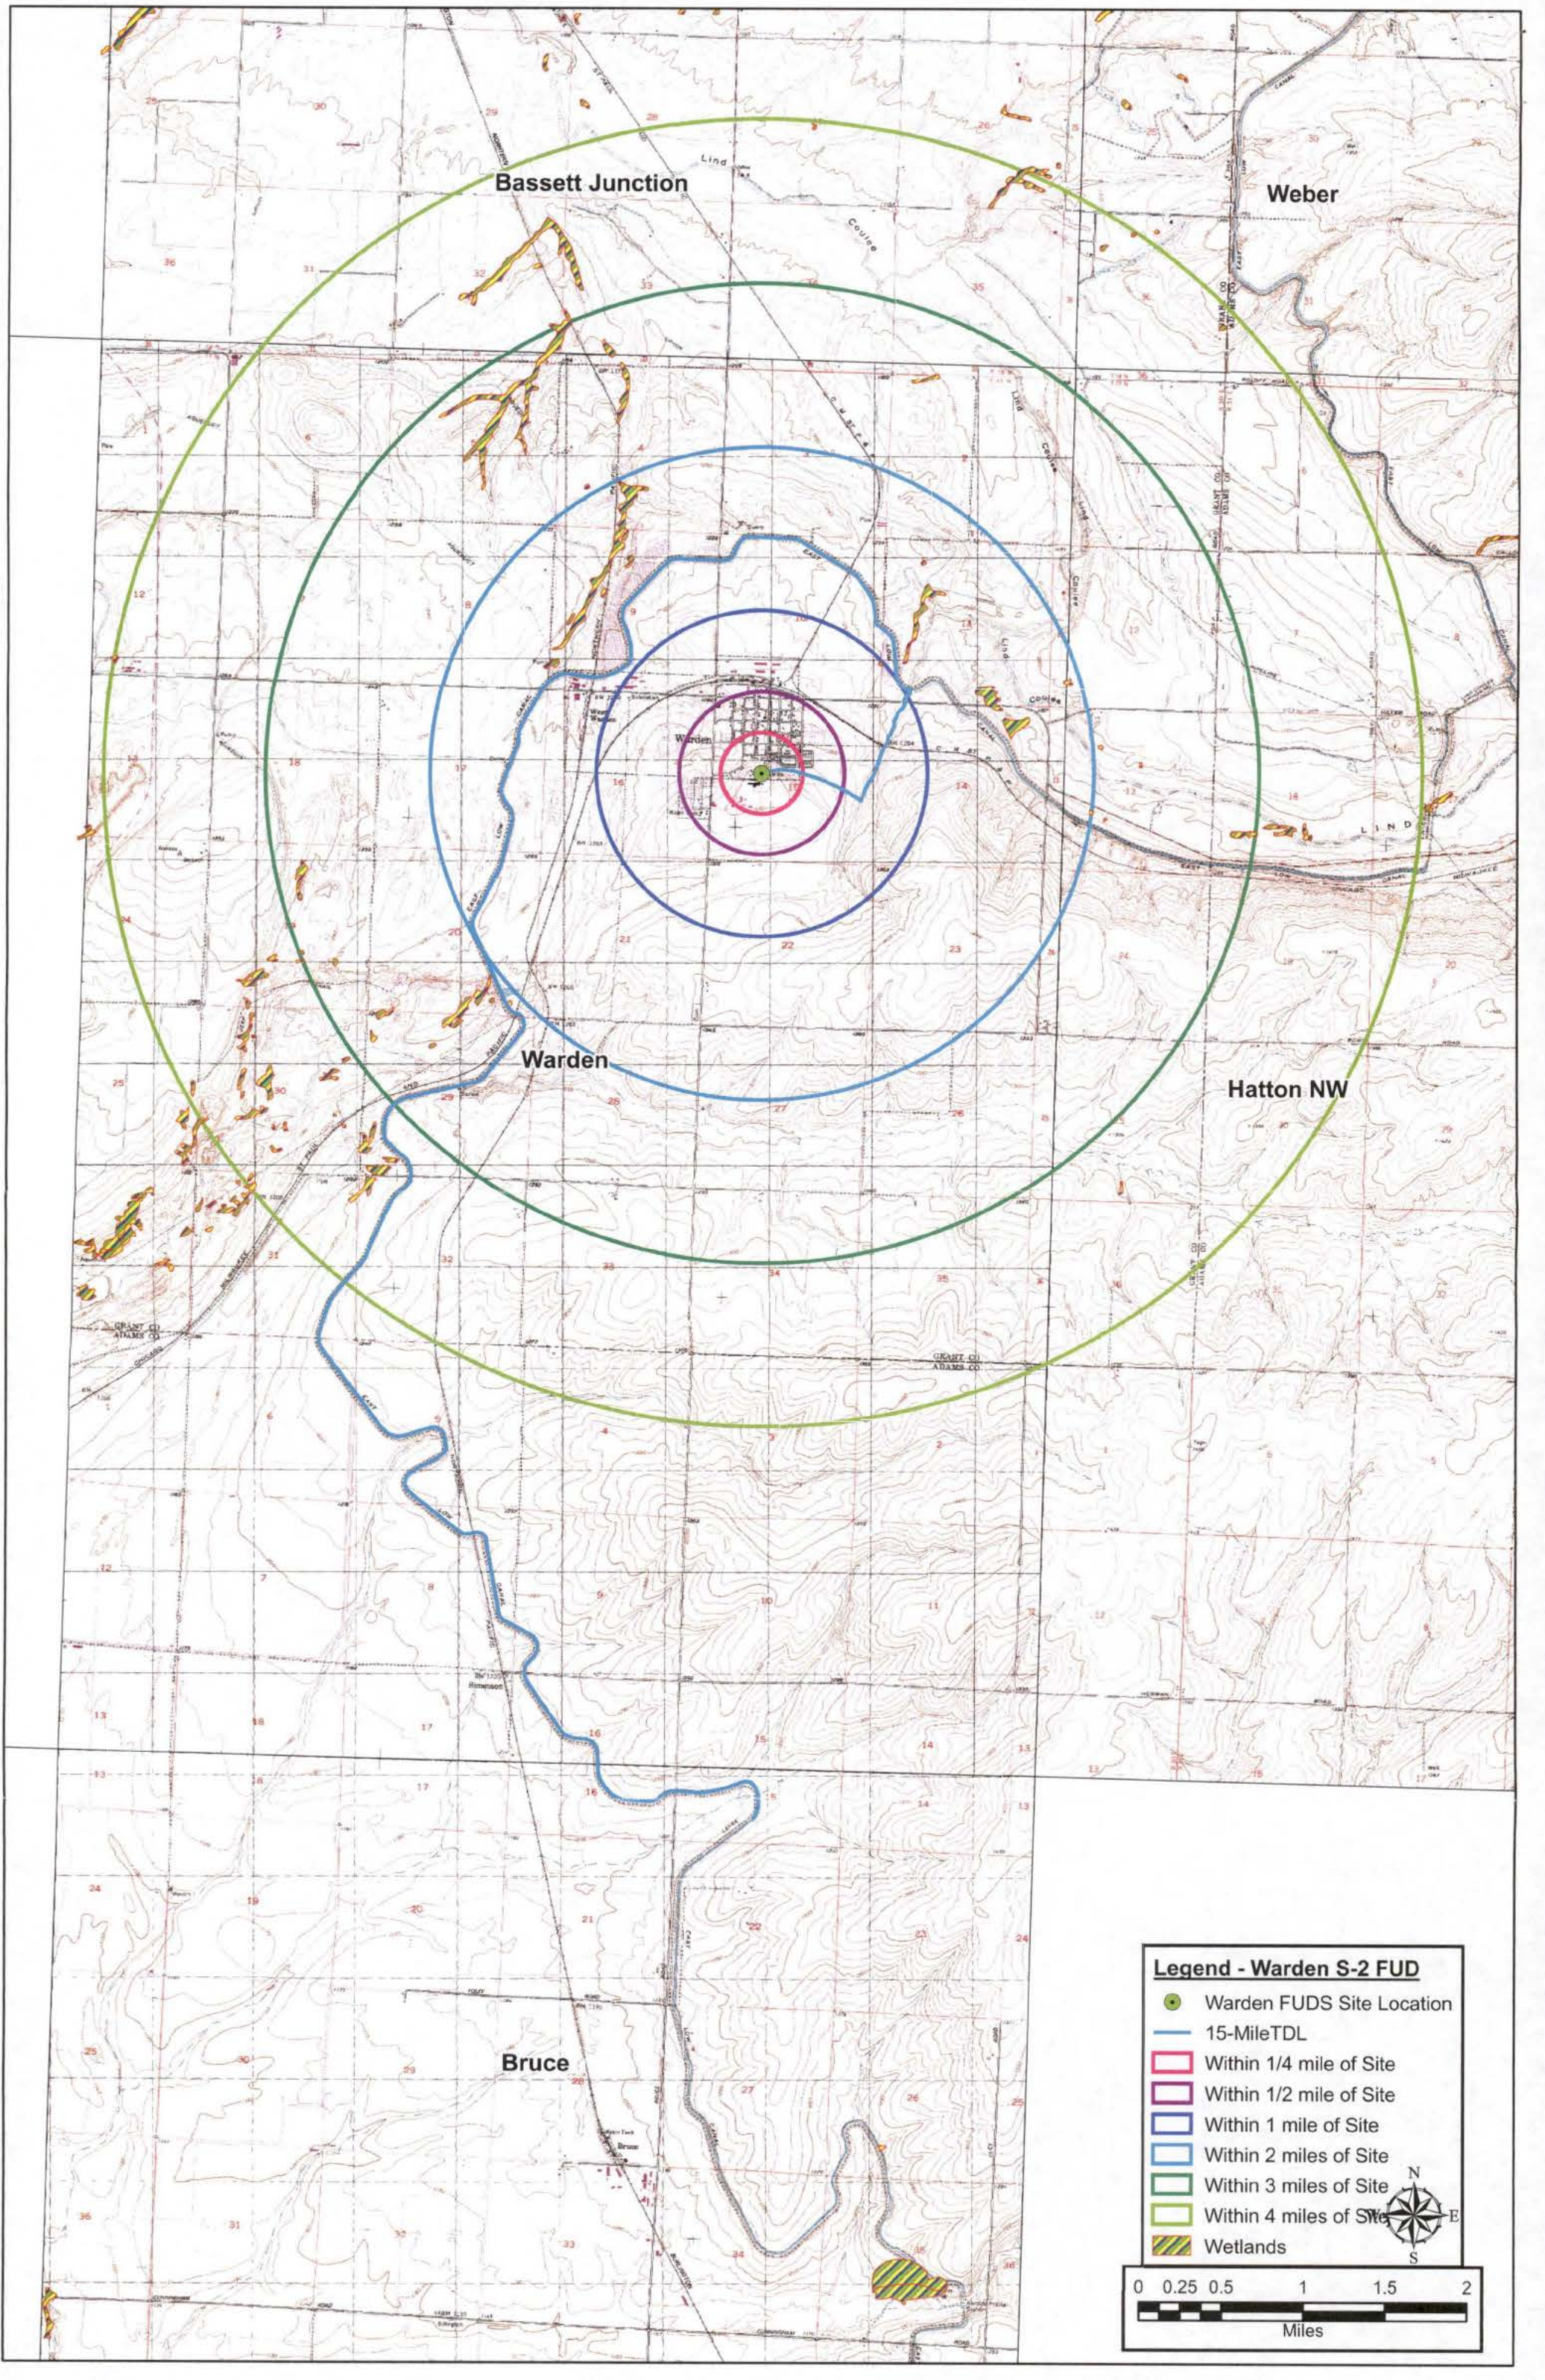

Attached please find the 4-mile and 15-mile map of wetlands for the Larson Air Force Base Titan Missile Launch S-2 site which is located in Warden, Washington. The map was generated from the following 7.5 minute topographic and National Wetland Inventory quadrangles:

- Bassett Junction, Washington;
- Weber, Washington;
- Hatton Northwest, Washington;
- Warden, Washington; and
- Bruce Washington.

The maps generated the following calculations of wetland acreage:

- | | |
|--------------------|--------------|
| • 0 to 0.25 mile | 0 acres |
| • 0.25 to 0.5 mile | 0 acres |
| • 0.5 to 1 mile | 0.8 acres |
| • 1 to 2 miles | 148.4 acres |
| • 2 to 3 miles | 200.7 acres |
| • 3 to 4 miles | 242.8 acres. |

Additionally, these maps indicate that no wetland frontage exists along the surface water migration pathway target distance limit.

SUBJECT: Population within 4-miles

REF: Contract Number EP-S7-06-02
Technical Direction Document 06-01-0023

Below is the population within a 4-mile radius of the Larson Air Force Base Titan Missile Facility S-2 site which is located in Warden, Washington. This information was generated from United States Bureau of the Census population housing tracks.

- 0 to 0.25 mile 557 people
- 0.25 to 0.5 mile 1,392 people
- 0.5 to 1 mile 589 people
- 1 to 2 miles 116 people
- 2 to 3 miles 195 people
- 3 to 4 miles 255 people
